# Data Quality – Quick check to improve your business processes performance now

<b>Plan to Procure</b>	<p><b>Do you know why customer expectations (SLA's) can not be met?</b></p> <ul style="list-style-type: none"> <li>► Due to missing material type or wrong procurement type the production is not started</li> </ul>
<b>Procure to Pay</b>	<p><b>Do you know why your stocks are too high or too low?</b></p> <ul style="list-style-type: none"> <li>► Wrong or missing MRP type leads to wrong procurement activities</li> </ul>
<b>Production to Stock</b>	<p><b>Do you know why your company acts non-complied to legal regulations?</b></p> <ul style="list-style-type: none"> <li>► Wrong batch indicator or serial number leads to missing traceability</li> </ul>
<b>Order to Cash</b>	<p><b>Do you know why shortfalls in payment occur?</b></p> <ul style="list-style-type: none"> <li>► Missing credit limit for a customer causes deliveries which should not be executed</li> </ul>
<b>Record to Report</b>	<p><b>Do you have always the correct decision support?</b></p> <ul style="list-style-type: none"> <li>► Incorrect material hierarchy leads to wrong assignment of sales revenues</li> </ul>

### Background

Companies need to improve business process efficiency to stay competitive and adapt quickly to changing market environments. Good master data quality is one of the critical factors for the smooth run of business processes and trustful management decisions. But: At many companies master data quality is very poor due to non harmonized, historically grown structures, multiple IT systems, continuous process changes and poor data governance.

### Challenges

- Understand the company individual impact of master data to transactional data in the business process
- Identify shortfalls & inconsistencies in the master data and the corresponding transactional data
- Define measures to improve the data quality
  - Initially (cleansing)
  - Continuously (continuous improvement)

### ► Benefits for business processes

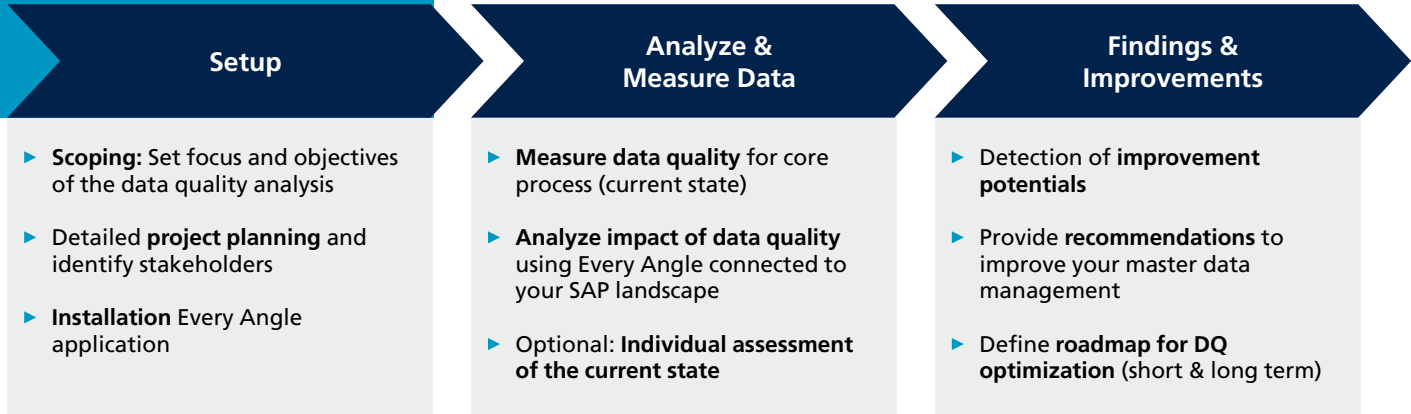

- **Gain process efficiency:** Less correction of wrong data during daily operation and more focus on core process activities
- **Meet customer expectation:** Improve deliverer accuracy and achieve SLA's
- **Be compliant:** Better achieve compliance with legal requirements and internal guidelines
- **Improve decision making:** Efficiency and accuracy in decision making process based on trustful information
- **Stock rightsizing:** Optimize your stock level over your complete supply chain in order to reduce stocks

# Quick Check | Master Data Management

## Data Quality – Quick check to improve your business processes performance now
